

JASPREET SINGH

Senior Systems Specialist | Cybersecurity, Identity & Infrastructure

Surrey, BC · jaspreetgill270@gmail.com · linkedin.com/in/jaspreet Singh45

PROFESSIONAL SUMMARY

I am a CompTIA, Microsoft, and Linux-certified systems administrator with five plus years of experience across Microsoft, Linux, and macOS environments, specializing in cybersecurity, identity and access management, and infrastructure. I mentor a team of four and own security, compliance, and continuity across the environment. My work spans identity governance and privileged access, endpoint and threat protection, vulnerability and risk management, and the incident response and disaster recovery procedures that sit behind them. I work under PIPEDA, OSFI, ISO 27001, and NIST-aligned control requirements, and I am comfortable translating technical risk into terms that leadership and business owners can act on. I am persistent by nature, and outside of work I run a Linux lab at home, which is where most of my infrastructure and networking depth came from.

PROFESSIONAL EXPERIENCE

Senior Systems Specialist | Securion Canada | Burnaby, BC | Nov 2025 – Present

Cybersecurity, identity governance, infrastructure, and policy ownership

- **Leadership and team development:** Mentor and develop a team of four across endpoint, identity, and access troubleshooting, and serve as the Tier 3 escalation point for the environment, driving knowledge transfer through documented SOPs and runbooks.
- **Identity and access management:** Own IAM across roughly 600 identities using Entra ID, Conditional Access, MFA, role-based access control, Privileged Identity Management, SAML and single sign-on federation, and LDAP, integrated with on-premises Active Directory in a hybrid model; maintain access governance and periodic reviews aligned to least privilege.
- **Security operations and threat management:** Operate Arctic Wolf managed SIEM alongside Microsoft Defender for Endpoint, Defender for Office 365, and CrowdStrike Falcon across the 600-device fleet, performing alert triage, policy tuning, and containment, and coordinating escalated response with the provider SOC.
- **Vulnerability and risk management:** Lead Qualys scanning and remediation cycles organization-wide, sustaining ~90% closure of findings by coordinating with system and application owners across departments, and produce compliance verification reporting for leadership.
- **Compliance and data governance:** Administer Microsoft Purview and data loss prevention policies across the tenant, supporting classification, retention, and access controls over sensitive business data in line with PIPEDA, OSFI, ISO 27001, and NIST-aligned requirements.
- **Incident response and tabletop exercises:** Maintain the organization's incident response plan, and designed and led a tabletop exercise simulating an AI-driven attack scenario, testing detection coverage, escalation paths, and cross-team decision-making against a threat model the existing plan had not accounted for.
- **Disaster recovery and business continuity:** Own disaster recovery and business continuity procedures including Veeam backup administration, restore verification, and NAS storage, defining recovery objectives and running recovery testing rather than assuming recoverability.
- **AI enablement and governance:** Own enterprise AI adoption end to end for roughly 600 users, covering licensing and credit management, tenant enrollment, and rollout of Microsoft Copilot and ChatGPT Enterprise across business units, and contribute to the AI governance framework defining acceptable use, data handling boundaries, and the tool review process organization-wide.
- **Infrastructure and directory services:** Administer Windows Server 2016/2019/2022 with Active Directory, Group Policy, LDAP, and PKI certificate lifecycle management across a hybrid on-premises and cloud-joined estate.
- **Cloud monitoring and administration:** Use Azure Monitor, Log Analytics with KQL queries, and Azure CLI to track service health, endpoint compliance, and security posture, producing recurring reporting for leadership.
- **Network administration:** Support network connectivity across switching and wireless infrastructure, including VLAN assignment and port configuration on managed switches, firewall rule changes, and VPN client configuration across the fleet.

Key Projects

- o **Enterprise AI Adoption and Governance:** Delivered licensing, credit management, tenant enrollment, and end-user training for Microsoft Copilot and ChatGPT Enterprise across business units, driving secure adoption rather than shadow usage of consumer AI tools, and helping define the governance framework that now determines how AI tools are evaluated and adopted company-wide.
- o **Enterprise Vulnerability Remediation Program:** Established and maintain a repeatable Qualys scanning and remediation cycle across all managed endpoints. Built the triage and escalation workflow now used by the team, coordinate remediation with system owners across departments, and produce compliance verification reporting for leadership. Program has sustained ~90% closure since inception.
- o **On-Premises to Cloud Server Migration:** Supported migration of in-house server infrastructure to cloud-hosted services, including SAML and single sign-on configuration to maintain authentication continuity across the transition.

- **Endpoint and device management:** Administered Microsoft Intune across 600 Windows endpoints and mobile devices supporting 600 users, enforcing compliance policies and configuration baselines, and managed Windows Autopilot deployments for 5–10 new hires per month, cutting per-device provisioning time from several hours to under 30 minutes.
- **Imaging and deployment:** Built and maintained standardized golden images deployed through SCCM and PXE network boot, handling driver and application layering and post-deployment configuration across the fleet.
- **Automation and scripting:** Wrote PowerShell and Microsoft Graph automation for bulk user provisioning and deprovisioning across Active Directory and Entra ID, license assignment and reclamation, stale account and device cleanup, and scheduled Intune compliance and inventory reporting, removing recurring manual effort from fleet administration.
- **Virtualization and application delivery:** Administered Citrix virtual desktop and application delivery infrastructure alongside VMware and Hyper-V, troubleshooting connectivity, session performance, and user experience issues across the environment.
- **Collaboration platform administration:** Governed SharePoint Online including site permissions, content architecture, and user access, and administered Teams and OneDrive across the Microsoft 365 tenant.

Key Projects

- o **SharePoint Online Migration — Acquisition Support:** Migrated 20 SharePoint Online sites totaling 400–600 GB across two tenants using ShareGate following a corporate acquisition. Remapped permission structures, validated content integrity post-migration, and confirmed user access continuity with no reported business disruption. Managed the full engagement independently without external project management support.
- o **Corporate Device Refresh:** Planned and executed a full corporate phone replacement across the organization, covering sourcing and procurement, Intune enrollment and Autopilot profile configuration, and end-to-end rollout with no disruption to daily operations.
- o **RingCentral Contact Center Migration:** Owned end-to-end cutover of ~100 call center users from RingCentral MVP to RingCentral Contact Center. Coordinated pre-migration testing across stakeholders, executed the cutover with no service outage, and delivered post-migration training that measurably reduced helpdesk escalations in the first two weeks.

IT Helpdesk | Securian Canada | Burnaby, BC | Aug 2022 – Feb 2023

- **Service delivery:** Resolved Tier 1 and Tier 2 support across Windows desktop environments through ServiceNow and Axosoft, working to defined response targets and escalating complex cases to senior engineering with full reproduction steps and documentation.
- **Account lifecycle:** Managed end-to-end account provisioning, group membership, Group Policy assignment, and deprovisioning in Active Directory, coordinating with HR and Compliance for day-one readiness and handling device recovery and license reclamation at offboarding.
- **Imaging and hardware lifecycle:** Performed device imaging and deployment using standardized builds and SCCM, and maintained workstation and peripheral hardware lifecycle including procurement coordination, replacements, warranty handling, and asset tracking.
- **Network support:** Resolved user-affecting connectivity issues across office switching and wireless infrastructure, escalating configuration changes to senior engineering.
- **Documentation:** Authored knowledge base articles and internal troubleshooting documentation, reducing repeat escalations and shortening onboarding time for new team members.

Operations Coordinator / IT | Evolution Fulfillment | Delta, BC | Apr 2022 – Aug 2022

- **Sole IT ownership:** Served as the only IT resource for a warehouse and fulfillment operation, owning device configuration, network and scanning-device connectivity, vendor coordination, and all day-to-day technical support.
- **Process implementation:** Designed and implemented the organization's first structured ticketing system, replacing ad-hoc email requests and giving management visibility into support volume, recurring issues, and resolution times.
- **Procurement and onboarding:** Coordinated hardware procurement, device setup, and user onboarding for new hires, establishing a repeatable process where none had previously existed.

CERTIFICATIONS

-
- | | |
|------------------------|---|
| • CompTIA Security+ | • Microsoft Azure Fundamentals (AZ-900) |
| • CompTIA Network+ | • Microsoft Azure Administrator (AZ-104, LinkedIn Learning) |
| • CompTIA A+ | • CompTIA CySA+ (in progress) |
| • CompTIA Project+ | • Mastercard Cybersecurity Job Simulation (Forage) |
| • LPI Linux Essentials | |
| • ITIL v4 Foundation | |

EDUCATION

- **B.S. Cybersecurity and Information Assurance** | Western Governors University | Expected 2027
 - **Completed coursework:** Digital Forensics in Cybersecurity, Information Systems Security, Managing Information Security, Networks, Network and Security Applications, Legal Issues in Information Security, Introduction to Cryptography, Linux Foundations, Python for IT Automation, and IT Project Management.
- **Diploma in Science, Major: Information Technology** | Langara College | 2017–2019

INDEPENDENT INFRASTRUCTURE PROJECTS

- **Multi-Host Linux Server Environment:** Design and administer a Linux environment spanning bare-metal and cloud compute — Debian, Fedora, Ubuntu Server, and Raspberry Pi OS — including LVM and ext4 storage layout, systemd service management, SSH-only headless administration, firewall policy, and unattended installation workflows; run Hyper-V and VirtualBox virtualization for isolated test systems, using snapshots to hold known-good states before destructive testing.
- **Segmented Network, VPN, and DNS Infrastructure:** Built a WireGuard VPN with Pi-hole and Unbound recursive DNS on Oracle Cloud ARM compute and Raspberry Pi hardware, joined to a Tailscale mesh spanning Windows, Linux, and mobile clients, with VLAN separation between trusted, lab, and untrusted segments. Root-caused DNS leakage from residual NRPT policy state, listener-scope failures on overlay subnets, and control-plane instability traced to a partial IPv6 implementation, each diagnosed from packet capture and service logs rather than trial-and-error reconfiguration.
- **Imaging, Deployment Media, and Recovery Tooling:** Maintain multi-ISO bootable deployment media (Ventoy) and PXE network boot for OS installation, recovery, and triage across Windows and Linux. Perform bare-metal installs, disk cloning and imaging, encrypted volume management (VeraCrypt), and hardware recovery on repurposed enterprise-class systems, with dedicated network storage and periodic restore verification.
- **Network Security Monitoring and Forensics Lab:** Building a segmented analysis environment on repurposed enterprise hardware: a Security Onion and Zeek network monitoring host, an isolated target range, and dedicated storage for disk images and memory captures. Use the environment for packet capture analysis in Wireshark, disk image examination with The Sleuth Kit, and memory analysis with Volatility, documenting each investigation as a written case writeup.

CORE TECHNICAL SKILLS

- **Identity & Access Management:** Microsoft Entra ID, Active Directory, LDAP, Conditional Access, MFA, RBAC, PIM, SAML, OAuth, single sign-on (SSO), federation, hybrid identity, identity governance, access control, least privilege, user access reviews and access certification, privileged access review, PKI and certificate lifecycle, zero-trust design.
- **Security Operations:** Arctic Wolf managed SIEM, Splunk, MDR/XDR, Microsoft Defender for Endpoint and Office 365, CrowdStrike Falcon, endpoint detection and response, email security and spam filtering, Qualys, Nessus, OpenVAS, Nmap, patch management, monitoring and alerting, incident containment, escalation, endpoint hardening, post-incident review.
- **Governance, Risk & Compliance:** PIPEDA, OSFI, ISO 27001, NIST-aligned controls, Microsoft Purview, data loss prevention (DLP), classification, retention, access reviews, risk assessment, control testing, audit support and evidence collection, policy development, incident response planning, tabletop exercises, security awareness training and phishing simulation, AI governance and acceptable use policy.
- **Business Continuity & Resilience:** Veeam backup administration, restore verification and recovery testing, disaster recovery and BCP planning, business impact analysis, RTO and RPO definition, NAS and network storage, change management, vendor management and vendor risk assessment.
- **Endpoint & Device Management:** Microsoft Intune, Windows Autopilot, MDM, mobile device enrollment, compliance policies, configuration baselines and CIS benchmarks, patch and update management, SCCM, PXE imaging, golden builds, hardware lifecycle and asset management, license management, Kandji and macOS MDM exposure.
- **Infrastructure & Networking:** Windows Server 2016/2019/2022, Group Policy, DNS, DHCP, TCP/IP, LAN/WAN, VLANs, managed switching, routing, network monitoring, firewall configuration (Palo Alto, Fortinet, Cisco), VPN (WireGuard, GlobalProtect, split-tunnel design), secure remote access.
- **Cloud & Virtualization:** Microsoft Azure, Azure Monitor, Azure CLI, VMware, Hyper-V, VirtualBox, Citrix virtual desktop and application delivery, Oracle Cloud (ARM compute)
- **Automation & Scripting:** PowerShell, Microsoft Graph, Python, Bash, Git, Ansible, compliance and inventory reporting automation.
- **Operating Systems:** Windows 10/11, Windows Server, Debian, Fedora, Ubuntu Server, Raspberry Pi OS, Bash, systemd, LVM and ext4 storage, SSH and headless administration, UFW/iptables firewalling, package management.
- **Platforms & Service Management:** Microsoft 365, Exchange Online, SharePoint Online, Teams, OneDrive, Google Workspace, ShareGate, ServiceNow, Jira, Axosoft, ITIL v4, incident, problem, and change management, SLA management, ticketing and queue management, change advisory board (CAB), root cause analysis, SOPs, runbooks, technical documentation.
- **Professional Strengths:** Mentoring and team development, cross-functional stakeholder coordination, stakeholder management, communication with non-technical audiences, escalation management, knowledge transfer, independent ownership of complex projects, prioritization across competing demands, adaptability.
